Machine Learning HW4 Recurrent Neural Networks

MLTAs mlta2020fall@gmail.com

Outline

- 1. Requirements
- 2. Task Introduction
- 3. Data Format
- 4. Kaggle
- 5. Rules, Deadline, Policy, Score
- 6. FAQ

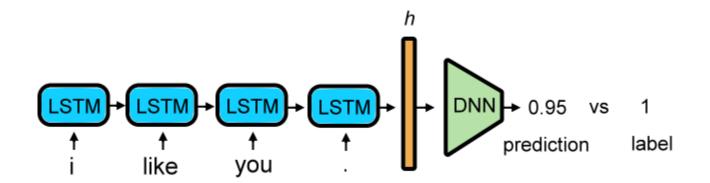

Requirements

- 請使用 RNN 實作
- 不能使用額外 data (禁止使用其他 corpus 或 pretrained model)
- 請附上訓練好的 best model (及其參數) 至 GitHub release 或 Dropbox,並於 hw4_test.sh 中寫下載的 command (可參照<u>這裡</u>的方法)
 - model 大小在 100MB 以內的可以直接上傳到 GitHub
- hw4_test.sh 要在 10 分鐘內跑完(model 下載時間不包含在此)
- 套件的部份請參考<u>連結</u>
- Conda file

Task introduction (Text Sentiment Classification)

Task - Text Sentiment Classification

```
0 +++$+++ on the flipside ... completely bummed that there isn ' t a or sighting .
1 +++$+++ ahaha im here carlos wasssup ?!
0 +++$+++ at least they text you
0 +++$+++ i feel icky , i need a hug
1 +++$+++ hey that 's something i ' d do !
1 +++$+++ thanks ! i love the color selectors , btw . that 's a great way to search and list .
```

Text Sentiment Classification

本次作業為 Twitter 上收集到的推文,每則推文都會被標注為正面或負面,如:

1 +++\$+++ thanks ! i love the color selectors , btw . that ' s a great way to search and list .

1:正面

0 +++\$+++ i feel icky , i need a hug

0:負面

除了 labeled data 以外,我們還額外提供了 120 萬筆左右的 unlabeled data

labeled training data : 19萬

unlabeled training data : 120萬

● testing data :1萬(5000 public,5000 private)

Preprocessing the sentences

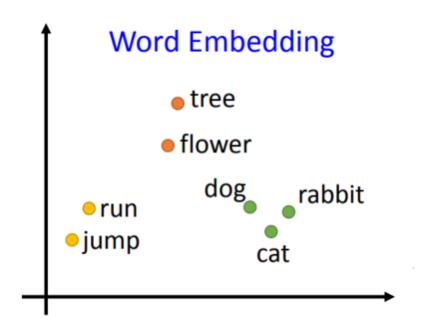

● 先建立字典,字典內含有每一個字所對應到的 index example:

"I have a pen." -> [1, 2, 3, 4] "I have an apple." -> [1, 2, 5, 6]

- 利用 Word Embedding 來代表每一個單字,
 並藉由 RNN model 得到一個代表該句的 vector (這份投影片 p.5 的 h)
- 或可直接用 bag of words (BOW) 的方式獲得代表該句的 vector

What is Word Embedding

● 用一個向量 (vector) 表示字 (詞) 的意思

1-of-N encoding

假設有一個五個字的字典 [apple, bag, cat, dog, elephant]
 我們可以用不同的 one-hot vector 來代表這個字

```
apple -> [1,0,0,0,0]
bag -> [0,1,0,0,0]
cat -> [0,0,1,0,0]
dog -> [0,0,0,1,0]
elephant -> [0,0,0,0,1]
```

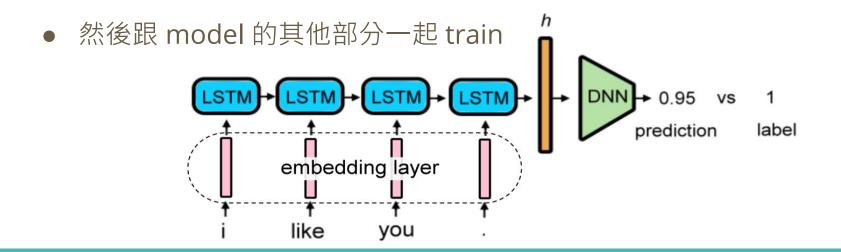

- Issue:
 - 缺少字與字之間的關聯性 (當然你可以相信 NN 很強大他會自己想辦法)
 - 很吃記憶體

200000(data)*30(length)*20000(vocab size) *4(Byte) = 4.8*10^11 = **480 GB**

Word Embedding

- 用一些方法 pretrain 出 word embedding (e.g., skip-gram, CBOW.)
- Word2Vect 介紹

小提醒:如果要實作這個方法, pretrain 的 data 也要是作業提供的!

Bag of Words (BOW)

● BOW 的概念就是將**句子**裡的文字變成一個袋子裝著這些詞的方式表現, 這種表現方式不考慮文法以及詞的順序。

例如:

(1) John likes to watch movies. Mary likes movies too. dictionary

(2) John also likes to watch football games.
在 BOW 的表示方法下,會變戶 BOW

(1) -> [1, 2, 1, 1, 2, 0, 0, 0, 1, 1]

(2) -> [1, 1, 1, 1, 0, 1, 1, 1, 0, 0]

(2) -> [1, 1, 1, 1, 0, 1, 1, 1, 0, 0]

Data Format

Data Format (labeled data)

```
0 +++$+++ on the flipside ... completely bummed that there isn ' t a or sighting .
1 +++$+++ ahaha im here carlos wasssup ?!
0 +++$+++
0 +++$+++
1 teast they text you
1 feel icky , i need a hug
1 +++$+++
1 thanks ! i love the color selectors , btw . that ' s a great way to search and list .
```

Data Format (unlabeled data)

text

```
7 1 more day !
8 nursing celeste with a tummy ache .
9 hates being this burnt !! ouch
10 just couldn ' t sleep last night . working 7a 3p , than dinner with megan . happy bday jl !
11 i love slaves ! by david raccah , linkedin , rotfl
12 is being super organised and making up orders to post first thing tomorrow !
13 laying in the bed . it feels soooooo good . what a long day
14 finally , at the airport . currently chilling out at the citibank lounge . maaaan , the wi fi here doesn ' t work ! lameeee !
15 back and still feeling shattered . still no cockney . . . i ' m ashamed to say .
16 so do i
```

Kaggle

Kaggle submission format

Kaggle link: https://www.kaggle.com/c/ml2020fall-hw4-3 請預測 testing set 中一萬筆資料並將結果上傳 Kaggle

- 1. 上傳格式為 csv 檔。
- 2. 第一行必須為 id, label,第二行開始為預測結果。
- 3. 每行分別為 id 以及預測的 label,請以逗號分隔。
- 4. Evaluation: accuracy

```
1 id, label
 20,0
 3 1,0
 42,0
 5 3,0
 6 4,0
7 5,0
 8 6,0
 9,0
108,0
11 9,0
12 10,0
13 11,0
14 12,0
15 13,0
16 14,0
17,0
18 16,0
19 17,0
20 18,0
```

Rules, Deadline, Policy, Score

Deadline

Kaggle, Github deadline:

12/11/2020 23:59:59 (GMT+8)

遲交一天 *0.8,兩天*0.6,遲交超過兩天零分。

Policy

GitHub 上 hw4-<account> 裡面請至少包含: (1, 2, 3的檔名請務必一模一樣)

- 1. report.pdf
- 2. hw4_train.sh
- 3. hw4_test.sh
- 4. train/test Python files
- 5. model 參數 (Make sure it can be downloaded by your script.)
 - 請將 model 下載到與 script 相同的位置
 - 上傳的 model 總和大小建議在 600 MB 以內

請不要上傳 dataset,請不要上傳 dataset,請不要上傳 dataset

Policy

- 1. 以下的路徑, 助教在跑的時候會另外指定, 請保留可更改的彈性, 不要寫死
- 2. Script usage:

```
bash hw4_train.sh <training label data> <training unlabel data> training label data: training_label.txt 的路徑 training unlabel data: training_nolabel.txt 的路徑 bash hw4_test.sh <testing data> prediction file> testing data: testing_data.txt 的路徑 prediction file: 輸出結果的 csv 檔路徑 (除非有狀況,不然原則上助教只會跑 testing,不會跑 training,因此請用讀取 model 參數的方式進行預測。)
```

Score - Report.pdf

Report link

● (0.5%) 請說明你實作之 RNN 模型架構及使用的 word embedding 方法,回報模型的正確率並繪出訓練曲線

- (0.5%) 請實作 BOW+DNN 模型,敘述你的模型架構,回報模型的正確率並繪出訓練曲線。
- (0.5%) 請敘述你如何 improve performance (preprocess, embedding, 架構等),並解釋為何這些做法可以使模型進步。

● (0.5%) 請比較 RNN 與 BOW 兩種不同 model 對於 "Today is hot, but I am happy" 與 "I am happy, but today is hot" 這兩句話的分數(model output),並討論造成差異的原因。

配分 Grading Criteria - kaggle (5% + Bonus 1%)

Kaggle and Github Deadline: 12/11/2020 23:59:59 (GMT+8)

Public simple baseline: 3%

Public strong baseline: 2%

Bonus - 1%

(1.0%) private leaderboard 排名前五名且於助教時間上台分享的同學

配分 Grading Criteria - report(5%)

Programming Report - 2%

https://reurl.cc/Q3Z9gp

Math Problem - 3%

https://drive.google.com/file/d/1fEu87banB4s6Yjku1dA5sMcnwCugEPBF/view?usp=sharing

Type in latex(preferable) or take pictures of your handwriting

Write them in report.pdf

FAQ

- 若有其他問題,請貼在 FB 社團裡或寄信至助教信箱,**請勿直接私訊助教**。
- 助教信箱: mlta2020fall@gmail.com
